Cretaceous Reservoirs Assessment Unit 20300101
Zagros Fold Belt Geologic Province 2030
Other geologic province boundary
TOTAL PETROLEUM SYSTEM: Zagros-Mesopotamian Cretaceous-Tertiary (203001)

ASSESSMENT UNIT: Cretaceous Reservoirs (20300101)

DESCRIPTION: This assessment unit contains both Cretaceous carbonate and clastic reservoirs in the Zagros fold belt and foreland. Clastic reservoirs predominate on the western side of the assessment unit whereas carbonate reservoirs are more common to the east nearer the Zagros thrust belt. The Total Petroleum System was considered to be charged by Cretaceous source rocks although there is uncertainty about mixing of Jurassic and Cretaceous oils in the area. Considerable proprietary data was available, particularly in Iran and Iraq, that facilitated the analysis including GeoMark data and other sources. Structural complexity increases in the unit in the direction of the Zagros Mountains.

SOURCE ROCKS: Several source rock intervals have been identified dominated by Lower Cretaceous Shales. The Berriasian Sulaiy and Minagish Formations are known source intervals in Kuwait. Source rocks have been identified in several Cretaceous age intervals including Hauterivian Ratawi Shale, Albian Zubair, Aptian Burgan (Nahr Umr), Shuaiba, and Mauddud Formations. Upper Cretaceous source rocks include Cenomanian Rumaila and Mishrif Formations.

MATURATION: Maturation (expulsion) in some models commences as early as 90 Ma with peak expulsion about 27 Ma. Most models show peak generation to be very recent (15 Ma or less) in the Mid Miocene (Neogene) coincident with the Zagros collision and the thick accumulation of orogenic clastics in the Zagros foredeep.

MIGRATION: Although expulsion may have started in Late Cretaceous, significant migration commenced probably no earlier than latest Oligocene/earliest Miocene and continues to present. Migration into the Zagros fold and thrust belt has permitted extensive oil and gas seeps and tar belt formation in the eastern Zagros thrust. The eternal flame at Kirkuk is an example of the ongoing charge and seepage of petroleum on the east flank of the petroleum system.

RESERVOIR ROCKS: The dominant clastic reservoirs, principally the Zubair (Barremian) and Burgan (Aptian) Sandstone are related to clastic, dominantly deltaic, sediment influx from western source areas such as the Saudi Arabian shield or to the north the Rutbah or Mardin high. Rudistid carbonate reservoirs are common in both Lower Cretaceous carbonate reservoirs such as Shuaiba Formation (Aptian) as well as Upper Cretaceous carbonate reservoirs such as Mishrif Formation (Cenomanian). A variety of other reservoirs related to oolites, and fracturing are known to occur in Cretaceous rocks.

TRAPS AND SEALS: There are several regional unconformities and shales that form significant seals. The Nahr Umr Shale (Aptian) is a major regional shale seal trapping major accumulations at Burgan, Safaniya, Rumaila, Zubair, Majnoon, and East Baghdad, as well as at many other localities. A Miocene salt seal in the Zagros fold belt is a critical block to vertical migration in the thrust belt structures of Iraq and Iran.

SEVENTH APPROXIMATION
NEW MILLENNIUM WORLD PETROLEUM ASSESSMENT
DATA FORM FOR CONVENTIONAL ASSESSMENT UNITS

Date:………………………….. 11/16/99
Assessment Geologist:…….. T.S. Ahlbrandt
Region:……………………….. Middle East and North Africa
Province:……………………… Zagros Fold Belt
Priority or Boutique……….. Priority
Total Petroleum System:…… Zagros-Mesopotamian Cretaceous-Tertiary
Assessment Unit:…………… Cretaceous Reservoirs

* Notes from Assessor: Lower 48 growth function.

CHARACTERISTICS OF ASSESSMENT UNIT

Oil (<20,000 cfg/bo overall) or Gas (>20,000 cfg/bo overall):… Oil

What is the minimum field size?………. 10 mmboe grown (>1mmboe)
(the smallest field that has potential to be added to reserves in the next 30 years)

Number of discovered fields exceeding minimum size:………… Oil: 145 Gas: 14

Established (>13 fields) X Frontier (1-13 fields) Hypothetical (no fields)

Median size (grown) of discovered oil fields (mmboe):
1st 3rd 527.5 2nd 3rd 417 3rd 3rd 333.8
Median size (grown) of discovered gas fields (bcfg):
1st 3rd 1202.1 2nd 3rd 3948 3rd 3rd 3198

Assessment-Unit Probabilities:

Attribute Probability of occurrence (0-1.0)
1. CHARGE: Adequate petroleum charge for an undiscovered field ≥ minimum size……………… 1.0
2. ROCKS: Adequate reservoirs, traps, and seals for an undiscovered field ≥ minimum size…… 1.0
3. TIMING OF GEOLOGIC EVENTS: Favorable timing for an undiscovered field ≥ minimum size 1.0

Assessment-Unit GEOLOGIC Probability (Product of 1, 2, and 3):………………………….. 1.0

4. ACCESSIBILITY: Adequate location to allow exploration for an undiscovered field ≥ minimum size…………………………………………………………………… 1.0

UNDISCOVERED FIELDS

Number of Undiscovered Fields: How many undiscovered fields exist that are ≥ minimum size?:
(uncertainty of fixed but unknown values)

Oil fields:………………………….min. no. (>0) 20 median no. 150 max no. 325
Gas fields:………………………….min. no. (>0) 10 median no. 35 max no. 75

Size of Undiscovered Fields: What are the anticipated sizes (grown) of the above fields?:
(variations in the sizes of undiscovered fields)

Oil in oil fields (mmbo)……………………min. size 10 median size 100 max. size 30000
Gas in gas fields (bcfg)……………………min. size 60 median size 400 max. size 17000

**Allocation of Undiscovered Resources in the Assessment Unit**

**To Countries or Other Land Parcels** (uncertainty of fixed but unknown values)

1. **Iraq** represents 37.1 areal % of the total assessment unit
   - **Oil in Oil Fields:**
     - Richness factor (unitless multiplier):
     - Volume % in parcel (areal % x richness factor):
     - Portion of volume % that is offshore (0-100%)
   - **Gas in Gas Fields:**
     - Richness factor (unitless multiplier):
     - Volume % in parcel (areal % x richness factor):
     - Portion of volume % that is offshore (0-100%)

2. **Iran** represents 47.7 areal % of the total assessment unit
   - **Oil in Oil Fields:**
     - Richness factor (unitless multiplier):
     - Volume % in parcel (areal % x richness factor):
     - Portion of volume % that is offshore (0-100%)
   - **Gas in Gas Fields:**
     - Richness factor (unitless multiplier):
     - Volume % in parcel (areal % x richness factor):
     - Portion of volume % that is offshore (0-100%)

3. **Kuwait** represents 4.3 areal % of the total assessment unit
   - **Oil in Oil Fields:**
     - Richness factor (unitless multiplier):
     - Volume % in parcel (areal % x richness factor):
     - Portion of volume % that is offshore (0-100%)
   - **Gas in Gas Fields:**
     - Richness factor (unitless multiplier):
     - Volume % in parcel (areal % x richness factor):
     - Portion of volume % that is offshore (0-100%)

4. **Saudi Arabia** represents 5.1 areal % of the total assessment unit
   - **Oil in Oil Fields:**
     - Richness factor (unitless multiplier):
