

Hollin-Napo

Assessment Unit 60410101

 Hollin-Napo Assessment Unit 60410101

 Putumayo-Oriente-Maranon Basin Geologic Province 6041

USGS PROVINCE: Putumayo-Oriente-Maranon Basin (6041) **GEOLOGIST:** D.K. Higley

TOTAL PETROLEUM SYSTEM: Mesozoic-Cenozoic (604101)

ASSESSMENT UNIT: Hollin-Napo (60410101)

DESCRIPTION: All petroleum production from this province is from Cretaceous and minor Tertiary age reservoirs. Cretaceous shales are also the primary hydrocarbon source rocks.

SOURCE ROCKS: The major oil and gas source rocks in the province are Early through Late Cretaceous Shales of marine and mixed marine and terrestrial depositional environments. These are the Cretaceous (1) Caballos Formation and Villeta "U" Sandstone of the Putumayo Basin, (2) the Hollin and Napo Formations of the Oriente Basin, and (3) Raya and Chonta Shales of the Marañon Basin. The Triassic and Jurassic Pucara and Sarayaquillo Groups of the Marañon Basin also exhibit some potential as source rocks.

MATURATION: Primary time of source rock maturation is the regionally pervasive late Miocene-early Pliocene (Quechua III) event that is expressed by thrusting and compressional folding over most of sub-Andean Peru (Mathalone and Montoya, 1995). Across South America, source rock units as old as Ordovician and as young as Neogene (Miocene and Pliocene time) have become mature in the Neogene phase(s) of basin development (Pindell and Tabbutt, 1995). Marksteiner and Aleman (1996) believe the main phase for hydrocarbon generation and migration was from Late Cretaceous to Middle Eocene.

MIGRATION: Almost all of the current production is from within the zone of source rocks that are thermally mature for oil, suggesting that lateral migration is limited and that migration is primarily vertical or from bounding shales. Ramon (1996) believes that oil migration in the Putumayo Basin has primarily been stratigraphically updip, with only limited vertical migration through faults; reservoirs are laterally drained and vertically isolated. Oils are commonly biodegraded and (or) water-washed in reservoirs located near the eastern margin of the area of thermally mature source rocks.

RESERVOIR ROCKS: Primary reservoir intervals are the (1) Cretaceous Villeta Formation in the Putumayo Basin, with lesser amounts of oil in the Cretaceous Caballos and Tertiary Pepino Formations, (2) the 'U' and 'T' Sandstones of the Cretaceous Napo Formation in the Oriente Basin, with lesser production from the Tena Formation, and the 'M1' Sandstone of the Napo Formation, and (3) Cretaceous Agua Caliente, Chonta, and Vivian Formations in the Marañon Basin.

TRAPS AND SEALS: Existing fields in the Putumayo-Oriente-Marañon Basin largely produce structurally trapped oil. Most of the reservoirs in fluvio-deltaic and marine sandstones of the Hollin and Napo Formations are low-relief north-south oriented anticlines of two distinct types: (1) footwall anticlines associated with normal faults or (2) hanging wall anticlines associated with reverse faults (Dashwood and Abbotts, 1990). Stratigraphic traps are formed mainly by termination of porous and

permeable fluvial or marine sandstone facies against lower-depositional-energy mudstone and mudstone-sandstone sequences. Reservoir seals are primarily interbedded marine shales and overlying Cretaceous and Tertiary Shales.

DATA FORM FOR CONVENTIONAL ASSESSMENT UNITS**

Date:.....	<u>2/4/99</u>	
Assessment Geologist:.....	<u>D.K. Higley</u>	
Region:.....	<u>Central and South America</u>	Number: <u>6</u>
Province:.....	<u>Putumayo-Oriente-Maranon Basin</u>	Number: <u>6041</u>
Priority or Boutique:.....	<u>Priority</u>	
Total Petroleum System:.....	<u>Mesozoic-Cenozoic</u>	Number: <u>604101</u>
Assessment Unit:.....	<u>Hollin-Napo</u>	Number: <u>60410101</u>
* Notes from Assessor	<u>Rocky Mountain Region growth factors.</u>	

CHARACTERISTICS OF ASSESSMENT UNIT

Oil (<20,000 cfg/bo overall) **or** Gas (≥20,000 cfg/bo overall):... Oil

What is the minimum field size?..... 1 mmboe grown (≥1mmboe)
(the smallest field that has potential to be added to reserves in the next 30 years)

Number of discovered fields exceeding minimum size:.....	Oil: <u>131</u>	Gas: <u>0</u>
Established (>13 fields) <u>X</u>	Frontier (1-13 fields) _____	Hypothetical (no fields) _____

Median size (grown) of discovered oil fields (mmboe):
1st 3rd 31.5 2nd 3rd 13.2 3rd 3rd 12.2

Median size (grown) of discovered gas fields (bcfg):
1st 3rd _____ 2nd 3rd _____ 3rd 3rd _____

Assessment-Unit Probabilities:

<u>Attribute</u>	<u>Probability of occurrence (0-1.0)</u>
1. CHARGE: Adequate petroleum charge for an undiscovered field ≥ minimum size.....	<u>1.0</u>
2. ROCKS: Adequate reservoirs, traps, and seals for an undiscovered field ≥ minimum size.....	<u>1.0</u>
3. TIMING OF GEOLOGIC EVENTS: Favorable timing for an undiscovered field ≥ minimum size	<u>1.0</u>

Assessment-Unit GEOLOGIC Probability (Product of 1, 2, and 3):..... 1.0

4. **ACCESSIBILITY:** Adequate location to allow exploration for an undiscovered field
≥ minimum size..... 1.0

UNDISCOVERED FIELDS

Number of Undiscovered Fields: How many undiscovered fields exist that are ≥ minimum size?:
(uncertainty of fixed but unknown values)

Oil fields:.....min. no. (>0)	<u>30</u>	median no. <u>120</u>	max no. <u>300</u>
Gas fields:.....min. no. (>0)	_____	median no. _____	max no. _____

Size of Undiscovered Fields: What are the anticipated sizes (**grown**) of the above fields?:
(variations in the sizes of undiscovered fields)

Oil in oil fields (mmbo).....	min. size <u>1</u>	median size <u>9</u>	max. size <u>750</u>
Gas in gas fields (bcfg):.....	min. size _____	median size _____	max. size _____

AVERAGE RATIOS FOR UNDISCOVERED FIELDS, TO ASSESS COPRODUCTS

(uncertainty of fixed but unknown values)

<u>Oil Fields:</u>	minimum	median	maximum
Gas/oil ratio (cfg/bo).....	125	250	375
NGL/gas ratio (bngl/mmcfg).....	10	20	30
<u>Gas fields:</u>	minimum	median	maximum
Liquids/gas ratio (bngl/mmcfg).....	_____	_____	_____
Oil/gas ratio (bo/mmcfg).....	_____	_____	_____

SELECTED ANCILLARY DATA FOR UNDISCOVERED FIELDS

(variations in the properties of undiscovered fields)

<u>Oil Fields:</u>	minimum	median	maximum
API gravity (degrees).....	8	24.3	46
Sulfur content of oil (%).....	0.03	0.61	3.05
Drilling Depth (m)	900	3200	4900
Depth (m) of water (if applicable).....	_____	_____	_____
<u>Gas Fields:</u>	minimum	median	maximum
Inert gas content (%).....	_____	_____	_____
CO ₂ content (%).....	_____	_____	_____
Hydrogen-sulfide content(%).....	_____	_____	_____
Drilling Depth (m).....	_____	_____	_____
Depth (m) of water (if applicable).....	_____	_____	_____

**ALLOCATION OF UNDISCOVERED RESOURCES IN THE ASSESSMENT UNIT
TO COUNTRIES OR OTHER LAND PARCELS** (uncertainty of fixed but unknown values)

1. Colombia represents 31 areal % of the total assessment unit

<u>Oil in Oil Fields:</u>	minimum	median	maximum
Richness factor (unitless multiplier):.....	_____	_____	_____
Volume % in parcel (areal % x richness factor):...	_____	25	_____
Portion of volume % that is offshore (0-100%).....	_____	0	_____
<u>Gas in Gas Fields:</u>	minimum	median	maximum
Richness factor (unitless multiplier):.....	_____	_____	_____
Volume % in parcel (areal % x richness factor):...	_____	_____	_____
Portion of volume % that is offshore (0-100%).....	_____	_____	_____

2. Ecuador represents 15 areal % of the total assessment unit

<u>Oil in Oil Fields:</u>	minimum	median	maximum
Richness factor (unitless multiplier):.....	_____	_____	_____
Volume % in parcel (areal % x richness factor):...	_____	25	_____
Portion of volume % that is offshore (0-100%).....	_____	0	_____
<u>Gas in Gas Fields:</u>	minimum	median	maximum
Richness factor (unitless multiplier):.....	_____	_____	_____
Volume % in parcel (areal % x richness factor):...	_____	_____	_____
Portion of volume % that is offshore (0-100%).....	_____	_____	_____

3. Peru represents 54 areal % of the total assessment unit

<u>Oil in Oil Fields:</u>	minimum	median	maximum
Richness factor (unitless multiplier):.....	_____	_____	_____
Volume % in parcel (areal % x richness factor):...	_____	50	_____
Portion of volume % that is offshore (0-100%).....	_____	0	_____
<u>Gas in Gas Fields:</u>	minimum	median	maximum
Richness factor (unitless multiplier):.....	_____	_____	_____
Volume % in parcel (areal % x richness factor):...	_____	_____	_____
Portion of volume % that is offshore (0-100%).....	_____	_____	_____
